

Answers for Assignment 2

21. D= Both A and B • $\beta_0, \beta_1, \dots, \beta_r$ are the regression coefficients. • Linear regression is about determining the best predicted weights by using the method of ordinary least squares.

22. d= The value $R^2 = 1$, which corresponds to $SSR = 0$ when $R^2 = 1$, it means that the model explains all the variability in the dependent variable, and $SSR = 0$, indicating a perfect fit in linear regression.

23. b= B_0 B_0 is the intercept or the value where the regression line crosses the y-axis

24. d= The top-left plot.

25. d= d, b, e, a, c d. Import the packages and classes that you need. b. Provide data to work with, and eventually do appropriate transformations. e. Create a regression model and fit it with existing data. a. Check the results of model fitting to know whether the model is satisfactory. c. Apply the model for predictions.

26. b= `fit_intercept` C= `normalize` D= `copy_X` E= `n_jobs`

27. Polynomial regression

28. c= you need more detailed results

29. b=Numpy

30. b=seaborn
